Summary

Frontend developer with 5+ years building production React and TypeScript, alongside a BEng in Software Technology Engineering (Jan 2027). Owns a shared component library and design system used by 15–20 engineers across 10 microfrontends. Self-hoster and homelab tinkerer outside work.

Experience

UNLwise , *Part-Time Frontend Developer*

Feb 2022 – Present | Aarhus, Denmark

- Own a shared React and TypeScript component library and design system consumed by 10 microfrontends and 15–20 engineers.
- Lead the gradual modernization of the component ecosystem and improvement of the bundling process.
- Migrate from Semantic UI React toward headless and unstyled component solutions based on a Figma design system. Kept existing applications accessible throughout and met WCAG 2.1 Level AA.
- Introduced a test suite, both unit with Vitest and visual with Cypress.
- Ship and maintain frontends within a complex microservices architecture, optimizing Docker workflows and configuring CI/CD pipelines to assist DevOps teams.
- Mentor interns and new frontend hires through code reviews, technical guidance, and frontend package development.

Podkrepi.bg , *Volunteer Fullstack Developer (open source)*

Dec 2021 – May 2024 | Remote, Bulgaria

- Shipped 73 merged PRs across the frontend and backend of a public, transparent donation platform.
- Engineered the primary payment process and workflow using React/TypeScript with Next.js, Node.js, NestJS, and Prisma. Wrote automated visual and smoke tests in Cypress covering the donation journey.
- Integrated Stripe APIs for card and recurring donations.

Devasoft , *Frontend Developer*

May 2021 – Sep 2021 | Sofia, Bulgaria

- Initiated and built an administration panel for a cloud provider platform using React/TypeScript, Redux, and React Bootstrap. Let admins provision virtual machines from templates via the cloud marketplace.
- Led frontend development as the sole frontend engineer collaborating with three backend developers.

Klevret , *Junior Frontend Developer*

Nov 2020 – May 2021 | Blagoevgrad, Bulgaria

- Developed CSS and JS for Umbraco themes or custom styled websites using complex SCSS. Also used jQuery, Vue and C# templates.

Education

VIA University College ,

Sep 2023 – Jan 2027 | Horsens, Denmark

Bachelor's in Software Technology Engineering (~10.4/12 - UK 1st)

- Bachelor's project with Aarhus University Hospital's radiology department, using machine learning on medical imaging to relate organ health to biological age. (inspired by [Thymic health consequences in adults](#) ).
- Completed coursework and hands-on academic projects focused on embedded C programming, databases and backend systems.

Projects

Chivou — Landing Page & Onboarding Flow

- Developed a responsive landing page and secure onboarding flow for a startup.
- Architected a serverless form submission pipeline using Cloudflare Workers to ensure secure data handling. Using Airtable as a backend to capture and manage user data.

Homelab server

- Self-hosted Debian server running Nextcloud, Plex and Immich in Docker behind Tailscale, with InfluxDB/Grafana monitoring and automated BorgBackup.
