Summary

Developer with 5+ years of professional experience and a strong interest in technology, problem-solving, and continuous learning. I enjoy understanding how systems work, building practical solutions, and exploring new tools - from frontend development and ML, to self-hosting and homelab projects. I am currently enrolled in a Bachelor's degree in Software Technology Engineering from VIA University College, where my bachelor project involves collaborating with Aarhus University Hospital's Radiology Department to explore new insights from medical imaging using AI.

Professional Experience

UNIwise ⓘ, *Part-Time Frontend Developer*

02/2022 – Present

Aarhus, Denmark

- Own the technical direction and evolution of a shared React component library used across many company microfrontends and 15–20 developers.
- Lead the gradual modernization of the component ecosystem and improvement of the bundle. Migrating from Semantic UI React toward headless and unstyled component solutions while maintaining compatibility with existing applications.
- Build and maintain frontends within a complex microservices architecture, optimizing Docker workflows and configuring CI/CD pipelines to assist DevOps teams.
- Mentor interns and new frontend hires through code reviews, technical guidance, and frontend package development.

Devasoft ⓘ, *Frontend Developer*

05/2021 – 09/2021

Sofia, Bulgaria

- Initiated and built an administration panel from scratch for a cloud provider platform targeting the Asian market.
- Led frontend development as the sole frontend engineer collaborating with three backend developers.
- Built the application interface using ReactJS, Redux, and React Bootstrap.
- Enabled admins to create the templates for provision ready-to-use virtual machines directly through the cloud marketplace.
- Maintained the primary admin-facing platform by implementing required features.

Klevret ⓘ, *Junior Frontend Developer*

11/2020 – 05/2021

Blagoevgrad,
Bulgaria

- Developed and maintained CSS and JavaScript for Umbraco-managed websites for a Scottish international client.
- Implemented styling and interactive features for Umbraco themes or custom styled websites using complex SCSS. Used also jQuery and C# templates wherever needed.

Education

VIA University College [↗](#), Bachelor's in Software Technology Engineering

09/2023 – Present

Horsens, Denmark

- Currently completing a bachelor's project on research about relating thymic health and other organ health in regards to biological age in people (inspired by [Thymic health consequences in adults](#) [↗](#)). In collaboration with **Aarhus University Hospital's radiology** department. Applying **medical machine learning** and software engineering principles to extract actionable insights from medical imaging.
- During the education I have done coursework and hands-on academic projects focused on **embedded C programming** and **backend systems**.

Organisations

Podkrepi.bg [↗](#), Volunteer Fullstack Developer

11/2021 – 03/2024

- Developed **frontend and backend** features for a transparent IT community donation platform.
- Engineered the primary payment process and workflow using **Next.js**, **Node.js**, NestJS, and Prisma.
- Integrated **Stripe APIs** and components to ensure secure, reliable transaction handling.

Projects

Chivou — Landing Page & Onboarding Flow

- Developed a responsive landing page and secure onboarding flow for a startup ([chivou.com](#) [↗](#)).
- Architected a serverless form submission pipeline using **Cloudflare Workers** to ensure secure data handling.
- Integrated **Airtable** as a lightweight backend to seamlessly capture and manage user registration data.

Homelab server

- Design and manage a self-hosted Debian Linux server environment using **Docker and Docker Compose** behind reverse proxies, used by family and close friends.
- Deploy and maintain production-like instances of Nextcloud, Plex, and Immich, secured via Tailscale.
- Implement system monitoring using InfluxDB and **Grafana**, alongside an automated Python-based BorgBackup system integrated with [healthchecks.io](#) [↗](#).
