Summary

Software engineer with 5+ years shipping production React/TypeScript, currently alongside a BEng in Software Technology Engineering. I own a design system used by 10 microfrontends, led its AI-first documentation, and run a self-hosted homelab where I try out new tools on real infrastructure. In my free time I built the payment flow for an open-source donation platform. Comfortable across the stack, from embedded C through backends, databases, serverless and container infrastructure. Looking to grow beyond frontend.

Experience

UNLwise , *Part-Time Frontend Developer*

Feb 2022 – Present | Aarhus, Denmark

- Own a shared React and TypeScript component library and design system consumed by 10 microfrontends and 15–20 engineers.
- Led an AI-first rewrite of the component library docs: extracted JSDoc from components, exported Storybook as plain-text docs, published an lms.txt index, and wrote AI skills for documenting new components, so engineers' AI assistants generate correct library usage instead of guessing.
- Led the gradual modernization of the component ecosystem and bundling, including the migration from Semantic UI React to headless components based on a Figma design system, and introduced the library's first test suite (Vitest unit + Playwright visual).
- Shipped and maintained frontends within a complex microservices architecture, optimizing Docker workflows and configuring CI/CD pipelines to assist DevOps teams.
- Mentored interns and new frontend hires through code reviews, technical guidance, and frontend package development.

Podkrepi.bg , *Volunteer Fullstack Developer (open source)*

Dec 2021 – May 2024 | Remote, Bulgaria

- Shipped 73 merged PRs across the frontend and backend of a public, transparent donation platform.
- Engineered the primary payment process and workflow using React/TypeScript with Next.js, Node.js, NestJS, and Prisma. Wrote automated visual and smoke tests in Cypress covering the donation journey.
- Integrated Stripe APIs for card and recurring donations.

Devasoft , *Frontend Developer*

May 2021 – Sep 2021 | Sofia, Bulgaria

- Initiated and built an administration panel for a cloud provider platform using React/TypeScript, Redux, and React Bootstrap. Let admins provision virtual machines from templates via the cloud marketplace.
- Led frontend development as the sole frontend engineer collaborating with three backend developers.

Klevret , *Junior Frontend Developer*

Nov 2020 – May 2021 | Blagoevgrad, Bulgaria

- Built Umbraco themes and custom sites (SCSS, jQuery, Vue).

Education

VIA University College ,

Sep 2023 – Jan 2027 | Horsens, Denmark

Bachelor's in Software Technology Engineering (~10.4/12 - UK 1st)

- Bachelor's project with Aarhus University Hospital's radiology department, using machine learning on medical imaging to relate organ health to biological age. (inspired by [Thymic health consequences in adults](#) ).
- Completed coursework and hands-on academic projects focused on embedded C programming, databases and backend systems.

Projects

Homelab server

- Self-hosted Debian server (Nextcloud, Immich, Plex in Docker behind Tailscale) with Borg backups monitored by Jev, a new typed-decision AI model: anomaly calls with confidence scores route alerts, backed by rule-based checks, all graphed in Grafana.

AI second-hand listing automation

- Shell pipeline that pulls photos from Google Drive, uses an LLM to identify each item, writes a listing description with a reference link, and fills a Google Sheet ready to paste into resale sites. Used by 2 friends to list ~40 items.

Skills

React | TypeScript | Rollup | Vite | Storybook | Vitest | Playwright | React Testing Library | Webpack | TanStack | Next.js | Git | C | Docker | Linux | Python | HTML, CSS | Bulgarian (native) | English (fluent)
